## About MimioMobile 3.0

The newest release of MimioMobile™ app for the Web brings our mobile application to even more devices, students, and classrooms. The application is available through a (compatible) Web browser at [mobile.mimio.com](http://mobile.mimio.com). The Web application enables educators to deliver collaborative lessons and assessments to an entire class. This release, coupled with the existing Apple and Android apps, allows the MimioMobile app to work on virtually any device the student may have in the classroom: tablets, smartphones, and laptops (including Chromebooks).

The Collaborate feature within MimioStudio 11.50 software, teachers can have a single student or the entire class work on the same activity on their devices, pause student sessions, share them in any combination on the front-of-the-class display, or hide all the sessions. The MimioMobile app is the only mobile device app that is part of a full interactive classroom.

## Device Support

### iOS (version 5.0 and above)

- iPad 2 and above
- iPhone 4\* and above
- iPod touch 4<sup>th</sup> generation\* and above

\* Only Vote and Collaborate functionality is recommended on the iPhone4 and iPod touch 4<sup>th</sup> generation hardware.

## New Features and Improvements

The MimioMobile 3.0 software release offers the following new features and improvements.

### Enhanced Collaborate Functionality

- Student activities can be paused by the teacher.
- Any multiple of student activities can be displayed on the front of classroom display.
- Increased performance and responsiveness on the mobile device.
- Added support for undo and redo.

## Known Issues

### Functionality limitation on iPhone 4 and 4<sup>th</sup> Generation iPod touch

Only Vote & Collaborate functionality is recommended on the iPhone 4 and 4<sup>th</sup> Generation iPod touch devices. Latency issues may be experienced with the Control feature.

### Functionality limitation when using a web browser

The desktop control feature is not available when using a web browser.

### QR Connect image orientation on Android devices

You may need to rotate the device to align with the QR code when scanning with Android devices.

### Unsuccessful initial connection using QR Connect on Android devices

The initial connection using the QR Connect method may be unsuccessful due to an existing limitation on Android. Will connect successfully upon retry.

### Writing with a stylus on Android devices

You may experience difficulty writing with a stylus on Android devices that support that input method.
